Instacart is a leading online grocery delivery and pickup service in North America that partners with retailers to offer same-day delivery. The platform connects customers with personal shoppers who handpick items from local stores.

Management has tasked you with building an interactive dashboard to visualize key metrics, answer critical business questions, and identify opportunities for growth and efficiency.

KPIs:

- Total Orders
- Total Customers
- Total Revenue
- Average Order Value

Business Problems/Questions:

❑What are the top 5 depts by revenue

--What are the top 5 departments by revenue.

```
SELECT departments.department AS department_name,  
       SUM(orders.quantity * products.unit_price) AS total_revenue  
FROM orders  
JOIN products  
  ON orders.product_id=products.product_id  
JOIN departments  
  ON products.department_id=departments.department_id  
GROUP BY departments.department  
ORDER BY total_revenue DESC  
LIMIT 5;
```

--What are the top 3 products we sold most during the weekends?

```
SELECT products.product_name,  
       SUM(orders.quantity)AS total_sold
```

Opportunities for Growth and Efficiency

- * The business is performing strongly, generating \$158 million in revenue from over 1 million orders and 63,000 customers.
- * Personal Care, Snacks, Pantry, Beverages, and Frozen are the top performing departments, so investing more in these categories could increase sales.
- * Bakery is more profitable than Alcohol (\$480K vs. \$342K), so adding more bakery products and promotions could boost profits.
- * Keep popular weekend products well stocked to avoid missing sales opportunities during peak shopping days.
- * Schedule more staff during the busiest ordering hours (10AM -4PM) to improve customer service and reduce wait times.
- * Use the sales trend to better plan inventory, ensuring popular products are always available while reducing excess stock.
- * No products are currently unsold, showing that the product range is meeting customer demand effectively.

Conclusion:

- * By focusing on top selling departments, expanding the bakery category, maintaining stock for popular products, and improving staffing and inventory planning, the business can continue to increase sales and operate more efficiently.
